

AURORA ROBSON

A multi-media eco friendly artist

Turning plastic pollution into fantastical landscapes

Aurora Robson is also the founding artist of [Project Vortex](#), an international collective of artists, designers and architects who also work in innovative ways with plastic debris. Robson is passionate about developing integrative methods for artists and designers to utilize plastic debris as a raw material.

Be inspired

Find out more about the artist in this short video:

[Meet the artist who turns litter into art - YouTube](#)

Check out some of the amazing art created by Aurora

Using recycled material create your own fantastical piece of art

Here are a few more ideas of upcycled art from other artists

Competition Time

April's artist of the month was specifically chosen to encourage everyone to build on the eco and sustainability work we already do in school.

Your challenge in April is to use recycled materials to create your own piece of art. Use your imagination, and be inspired by Aurora Robson to be colourful, wild, and even wacky with your creation.

As a school we are very good at reusing and repurposing items. What can you reuse at home to create a new piece of art?

Competition winners will have the image of their work turned into postcards. We'll be using the postcards to write congratulations notes to anyone who does something fantastically sustainable - who is an Eco Star!

Have fun with the challenge. I am really looking forward to seeing your creations.
